

ARCHIVES OF SURGERY

VOL 131 NO. 12, DECEMBER 1996

MISSION STATEMENT

To promote the art and science of surgery by publishing relevant peer-reviewed clinical and basic science information to assist the surgeon in optimizing patient care. The *Archives of Surgery* will also serve as a forum for the discussion of issues that involve ethics, teaching, surgical history, and socioeconomic concerns.

*Approved by the Editorial Board, *Archives of Surgery*, July 19, 1996.

Carcinoma of the parathyroid gland represents 1% or less of the tumors of that organ. One of the microscopic characteristics of this malignancy is the broad band of fibrous tissue interlacing the interstices of the gland. The universally accepted criteria for parathyroid malignancy are distant metastases, local invasion, and tumor recurrence.
